Practical Ophthalmic Microsurgery by Arthur Lim Siew Ming. 1980 PG Medical Books, Singapore.

This book concentrates on the practical aspects of ophthalmic microsurgery, dealing with the common types of microscopes available and the common problems encountered by one starting on microsurgery and how to overcome these.

The coloured photographs are excellent and the

author is to be congratulated for the magnificent prints.

This book will prove useful to the young ophthalmologist who is about to embark on ophthalmic microsurgery.
