# BOOK REVIEW

## SEPTO AND RHINOPLASTY — A STEP-BY-STEP INSTRUCTION

By Finn Jeppesen  
Munksgaard, Copenhagen

This small and yet comprehensive book is aimed at the aspiring rhinological surgeon and provides a step by step manual in operative procedures in detailed instructions in the simpler methods and orienting towards the more complex.

The author has combined both aesthetic and functional aspects in a very readable text abound with beautiful diagrams. There are numerous practical hints useful even for the experienced surgeon. The chapters cover most common conditions and the one on instrumentarium is particularly useful for the resident.

The well listed references will satisfy those who wish further reading.

However, this book would have been more complete for surgeons in this part of the world if it had covered rhinoplasty in the non-Caucasian nose. Otherwise, this laudable book is highly recommended for all rhinologists.
